

Ball Valve Selection Checklist

DEMO ONLY - inquiry preparation worksheet

Use this one-page checklist to organize questions for a supplier. It is not a product datasheet, certificate, engineering approval or quotation. DEMO-MBV-02 is an illustrative product reference.

01 Product and quantity

List each reference, requested quantity, optional alternatives and whether quantities can be combined. Keep one line per product.

02 Connections and dimensions

Specify threaded or weld-end connection, nominal size, applicable connection standard and available installation space. Attach a dimensioned drawing if available.

03 Operating conditions

Describe the fluid or gas, normal and maximum pressure, temperature range, switching frequency and indoor or outdoor conditions.

04 Materials and compatibility

Request confirmation of body, ball, stem and seat materials. Ask the supplier to confirm compatibility for the stated operating conditions.

05 Documents and delivery

List drawings, inspection records or compliance documents required for the destination market. Include delivery location and requested schedule.

06 Before sending

Check units, revision numbers and file names. Identify unknown values explicitly. Ask for confirmation of final specifications, availability, lead time and commercial terms.

Demo notice: All ValveNorth products and reused AI images on this demonstration site are illustrative. No pressure rating, certification, stock level or delivery commitment is established by this checklist.
